

Due Diligence! Reduce Driver Liability, take care of your own Professionals

Attention Hospital Workers, Board of Education employees, Government workers, Children's Aid Society, Volunteer organizations, Church groups any Public Sector organizations that have

- Personal Vehicles
- Company Cars
- Delivery Vans
- Service Trucks
- Construction Vehicles
- Volunteer Drivers

FOR AS
LOW AS
\$100
per person

Did you know

Motor vehicle collisions are the single greatest cause of traumatic workplace fatalities in Ontario. Between 2000 and 2005, it is estimated that vehicle crashes were responsible for 199 work related deaths, accounting for more than 30% of all work-related traumatic fatalities.

Research confirms that individuals driving on company business are more likely than other road users to be involved in a collision resulting in death or serious injury.

Employer responsibilities?

Article 3 of Bill C-45 provides that:

Every one who undertakes, or has the authority, to direct how another person does work or performs a task is under a legal duty to take reasonable steps to prevent bodily harm to **that person, or any other person, arising from that work or task.**

What do you do to manage your employees risks associated with 'driving for work'? Does a valid drivers licence and a clean abstract ensure the safety of your employees, and others, when they are on the road? **It is the employers responsibility to ensure, as far as is reasonably practicable, the safety of their employees while at work.** It is the employers responsibility to carry out an assessment of the risks to the health and safety of their employees while they are at work, This includes work-related driving activities. **Employees driving as a requirement to carry out their professional duties are considered to be undertaking a work activity and the vehicle they are driving, regardless of ownership, is regarded as a place of work.**

What is your "Due Diligence" responsibility?

An Employer must:

Establish a simple and effective safety management system for driving at work just as you would for any other work related activity. This should include:

- Comprehensive road safety policies supported by top management.
- Road safety management procedures, including risk assessments for both drivers and specific driving tasks.
- Maintain and review accident statistics. Look for common trends and risks.
- Implement safe practices that eradicate or minimize identified driving risks.

- Ensure managers understand their role and responsibilities for managing road risk and are able to apply company policy.
- Ensure drivers are given relevant information, training and supervision to be safe on the road.
- Regularly audit the safety of journeys and amend policies and procedures accordingly if new risks are identified.

Benefits of a proper occupational Road Safety Program:

- Reduced risk of injury to the companies most valued asset, their employees
- Healthy and safe workers take less time off
- Reduced collision frequency and severity
- Reduction in direct and indirect financial costs involved in road collisions
- Reduce the need for and cost of replacement vehicles
- Reduced costs due to better driving standards
- Increased satisfied customers as a result of fewer missed or late orders due to non-delivery
- Increased productivity due to higher moral, less time off work due to reduction in injury
- Increased trade-in value to vehicles
- Increased corporate responsibility and improved safety culture

Canadian Pro Drivers teaches drivers to manage their driving risk.

**OUR SECRET:
Driving is a mental Skill!**

Each driver processes risk differently, we give them the tools to process their risk.

Canadian Pro Drivers programs train the brain! We train the Driving Personality of your drivers!

There are no accidents! Drivers cause collisions and collisions can be avoided. Understanding and recognizing each drivers' risk factor is the first step to predicting accident prevention.

Canadian Pro Drivers understands the motivation behind **Driver Behaviour** and have created a unique behavioural risk assessment program specifically for occupational drivers. This program along with our In-class "driver personality" program is available exclusively through CPD. Based on Myers – Briggs Personality types we can predict the Driver Risk factor (DRF). This cost effective assessment will **then provide your drivers with proper mental and physical options to reduce that risk.**

Changing Driver Behaviour - The key to Sustainable Collision Prevention!

Our risk factor program allows us to target those drivers most at risk. It may also be used to identify drivers who would benefit from refresher training as part of a long term driving safety policy. **The difference we make in training** is that we make all drivers aware of their own risk factor as well as providing them with the knowledge to understand the risk factors of the drivers around them, preventing the potential collision.
